Note that the presentations will be conducted in French with dual projection of slides in French and English.

Target audience
Clinicians

Aims
The aim of this session is to provide an updated overview of new therapeutics in various fields of respiratory medicine. Future drugs and strategies that might develop within the next 5 years will also be presented and discussed by internationally recognised experts.

13:00–15:00 ERS/French Programme I
Innovative treatments and new concepts in respiratory medicine: the future looks bright indeed!

Chairs: Elisabeth H.D. Bel (Netherlands), Philippe Delaval (France)

13:00 Lung reduction coil treatment in severe emphysema
Gaëtan Deslee (France)

13:30 Personalised medicine and COPD: where are we now?
Nicolas Roche (France)

14:00 In search of asthma fingerprints
Kian Fan Chung (United Kingdom)

14:30 Obesity hypoventilation: from pathophysiology to treatment
Jean-Paul Janssens (Switzerland)

Aims
This session will focus on new diagnostic tools and therapeutic approaches that will help pulmonologists to treat or prevent respiratory disorders. It will also cover therapeutic aspects in pulmonary hypertension and intensive care medicine.

15:30–17:30 ERS/French Programme II
Guidelines, new diagnostic and therapeutic tools to help pulmonologists: all the reasons why we cannot ignore them anymore

Chairs: François Chabot (France), Guy F Joos (Belgium)

15:30 ERS/ESC European guidelines for the diagnosis and treatment of pulmonary hypertension
Marc Humbert (France)

16:00 Lung transfer of Nitric Oxide (DLNO): from practical guidelines to clinical applications
Anh Tuan Dinh-Xuan (France)

16:30 Idiopathic pulmonary fibrosis: from early detection to treatment
Vincent Cottin (France)

17:00 New perspectives in the treatment of MDR-TB
Giovanni Battista Migliori (Italy)
